

## **2002 Passenger Survey**

Gatwick – Heathrow – Luton – Manchester – Stansted

## Preface

In keeping with earlier CAA Survey publications, the Authority produces an annual report at the end of each survey cycle.

This report, featuring the airports surveyed throughout 2002, is based on results from these surveys where all relevant core questions have been answered. We hope that the reader will find this publication both interesting and of practical use. As with earlier publications, we would ask readers who have corrections or comments to contact [us](#).

## Policy Role

The Civil Aviation Authority has an important policy role to play in advising the Government on matters concerning airports and has a duty to ensure that up to date and relevant information is available on which such advice may be based. In particular, Chapter 16, Section 16 (2) of the 1982 Civil Aviation Act states:

"It shall also be the duty of the Authority -

- (a) to consider what aerodromes are in its opinion likely to be required from time to time in the United Kingdom in addition to or in place of or by way of alteration of existing aerodromes; and
- (b) to make recommendations to the Secretary of State arising out of its consideration of the matter, ...."

Surveys, such as the one whose results are described in this report, help airlines, airport operators and the Government address the issue of the provision of aviation infrastructure. It is also a valuable tool for profiling markets as well as identifying potential new markets. While the survey, naturally, has a UK focus, a number of airline operators make use of survey research to better understand global interline patterns, in particular London hub and spoke activities.

The success or failure of an air passenger survey depends to a large extent on the help and co-operation of the people on the spot. This involves not only the expertise of the interviewer and the willingness of the passenger to be interviewed, but also the attitude of airport staff, airline staff, immigration officers, security officials and others towards the presence of interviewers within or near their own working areas. We would like to thank them for the assistance they gave towards the smooth running of the 2002 survey.

# Introduction

This report covers the airports, Gatwick, Heathrow, Luton, Manchester and Stansted. Definitions of all terms used throughout this report appear in the Appendix.

## The Early Years

Since 1968 a series of surveys has been undertaken to obtain information about air travellers and the determinants of the travel market. These surveys have been designed to obtain information of a kind that could not be collected on a routine basis from the air transport industry. The surveys have included questions on journey purpose, final and intermediate surface origins/destinations, means of transport to and from airports, route flown, country of residence and income. This information is used in assessing the type of market served by airports and consequently for forecasting air transport demand and for planning airport facilities.

Cycles of surveys were undertaken at major UK airports in the periods 1970-1972, 1975-1978, 1982-1987 and 1990-1996. Each cycle covered, by sample, 95% of terminal passengers in the UK and normally surveys were arranged so that airports in the same broad regions were surveyed at the same time.

## Going Continuous

Following the 1996 survey run at five London airports, Birmingham, Manchester and four Scottish Airports demand built up for more regular survey data. After a consultation process with all interested parties, it was decided to run a survey each year at Gatwick, Heathrow and Manchester Airports so long as sufficient sponsorship is forthcoming. Joining these Continuous Airports in 2001 were Luton and Stansted.

In parallel with the Continuous Survey, the Authority embarked upon a three-year Regional cycle, which began in 1999. Reports on each of these surveys are also available. For further information regarding frequency and scope of CAA Surveys, the interested reader should refer to the section entitled **History** in the main appendix.

## The 2002 Survey

In planning the 2002 survey of air passengers, a principal concern was to derive maximum value from the information collected, but at the same time to minimize passenger inconvenience. Therefore, in order to cause as little disruption to passenger flow as possible, it was necessary to impose a constraint on questionnaire length and content. To cause minimum inconvenience, most passengers were interviewed whilst waiting to board their aircraft.

The Authority used its own field-force, managing the project from London. Shifts in each month were carefully structured so that all scheduled routes and in most cases all flights within a route were regularly sampled. The sampling procedure, which was usually a form of systematic random sampling, is fully described in the Appendix.

Several interested parties were consulted over the content of the questionnaire, including government departments and airport and airline management groups. The questionnaire was

similar to previous survey questionnaires in that the same basic questions appeared but some new questions were included specifically for the co-sponsors of the survey. Sample questionnaires used throughout the survey are reproduced in the Appendix.

# Sampling Techniques

The Continuous survey ran between January and December 2002 at Gatwick, Heathrow, Luton, Manchester & Stansted. Shifts were selected so that during each sub period, each shift (e.g. Monday am) was sampled approximately the same number of times.

## Primary Sampling Technique

At all airports only departing passengers were interviewed, previous surveys having shown that differences in characteristics of arriving and departing passengers were not significant.

Teams of interviewers positioned themselves in a gate room or at the entrance to the departure lounge and one interviewer counted the passengers as they entered, across a predetermined line, and every third or fifth passenger was selected for interview. If an interviewer was not immediately available, then the contact was handed an identification card and then approached as soon as an interviewer became free. All passengers were counted, apart from children less than two years of age.

A constant monitor of sampled flights was maintained throughout the year to ensure that as far as possible all routes, and in most cases individual flights, were covered regularly throughout the survey.

It was assumed that those passengers who were candidates for an interview, but who for one of a variety of reasons could not be interviewed, had the same characteristics as those who were successfully interviewed. The overall interviewing success rate for the 2002 survey was 95%.

Illustrative questionnaires have been reproduced in the appendix section together with an identification card.

## Alternative Sampling Technique

The notes below will summarise a Regional survey technique used to ensure that a passenger is selected at random for interview. This technique can be used irrespective of the number of team members present.

The interviewing area where passengers or customers are to be found should be clearly defined to all team members present. A good example maybe an airside departure lounge or gateroom where passengers reside before being directed to a nominated gateroom to board their flight. At smaller airports, such as Inverness, it may be possible to interview airport users prior to check-in (Landside).

The interviewing area should be divided into a number of virtual areas, dependent upon the number of team members available to interview. If there are 4 team members, the interviewing area should be divided into quarters, where there are only three team members, then the area should be divided into thirds and so on.

An interviewer will then be assigned an area. It will then be that interviewer's responsibility to sample passengers who move into their area.

It is of key importance that interviewers do not avoid certain passengers and show any bias or favouritism to any other groups of passengers. The sampling technique demands that a representative group of passengers be sampled.

On selecting the first passenger (perhaps to the extreme left of the interviewing area) the interviewer will run through the questionnaire in the normal manner. On the completion of this interview, the interviewer will then count three more passengers towards the right. The third passenger counted, assuming that they are eligible for interview will then be interviewed. Once this interview has been completed, the interviewer will then count a further three passengers and begin the process again.

Adopting this technique will enable interviewers the freedom to work in a relatively large area without the need for a counter to indicate the next passenger to be sampled. Routine checks will be conducted on a monthly basis, to ensure the integrity of the data is maintained.

The interviewing areas can be redefined during busy or quiet periods directly inline with the number of team members available to work. As in all other sampling methodologies, the same passenger cannot be interviewed twice on the same shift.

## Weighting Techniques

The sampling and weighting of the 2002 survey was conducted on a route-by-route basis at each of the 2002 survey airports.

The first stage was to list all scheduled routes operated in and out of the airports by airline and flight number and list all charter routes by airline and destination. The various airport authorities then provided uplift/discharge figures for each month of the survey. The routes were initially broken down by airlines into single sector and multi sector groups.

For single sector routes the number of passengers interviewed were added together and divided into the respective monthly figures to obtain the weights. On multi sector routes weighting was undertaken by flight number. If flights took different routes on different days as well they were weighted by final destination of the aircraft. Where multi sector and single sector flights were in operation on the same routes they were divided into separate categories.

In the majority of cases multi sector routes were unique and therefore weighted separately and when multi sector routes were combined they were usually for flights stopping at the same points.

As some flights operated at times when shifts were not run e.g. diversions and most domestic charter flights, the weighted survey totals were different from those published in 2002 annual statistics as described earlier.

# CAA Definitions

## Passengers' use of airport

Terminating passengers are passengers who arrive at or depart from an airport by surface modes of transport. Transfer passengers are passengers who change aircraft at the airport and have no other reason for visiting the airport. They can be divided into international-to-international, international to domestic, domestic to international and domestic-to-domestic Transfer passengers. A Transfer passenger constitutes two passenger movements, one arrival and one departure. Thus, a passenger interlining from one international flight to another counts as two international passenger movements. A passenger interlining from a domestic flight to an international flight counts as one domestic movement and one international movement.

There are two distinct types of international-to-international Transfer passengers - airside Transfer and landside Transfer. Airside Transfer passengers do not pass through immigration and landside passengers do pass through immigration. Transit passengers are passengers who arrive and depart on the same flight. These passengers do not pass the interview point and normally remain on the aircraft. Terminal passengers are those passengers who join or leave a flight at an airport; they include all passengers with the exception of transit passengers. The diagram below shows how the classifications are connected.

## Origin/destination

Where a journey has been broken for a reason other than transit, it is considered to restart or finish at that point. The following examples illustrate the definition. Passenger A leaves home in Swansea, travels to Reading, has lunch and then flies out from Heathrow Airport. This passenger's origin would be Swansea as his reason for being in Reading was transit. Passenger B from Watford travels to Amersham and has a business engagement. She then goes to Gatwick Airport and flies to Paris. This passenger's origin is classified as Amersham as her journey has been broken for a reason other than transit. A transit stop is defined as the point at which a passenger chooses to break his journey to the airport, the main reason for doing so being to rest, e.g. using airport hotels prior to early morning flights, calling in on or staying with relatives etc.

For the purpose of analysing the origins and destinations within the United Kingdom of terminating

passengers, regions, areas and zones have been defined in terms of boundaries of, respectively, economic planning regions, counties and district council areas. The area of residence of UK residents was recorded using the same zonal system.

## **UK and foreign passengers**

A passenger is classified as a UK resident if the UK is the country in which he has lived for most of the last twelve months. Those resident in a country outside the UK are classified as foreign residents.

## **Business and leisure passengers**

Journey purpose is classified as business or leisure in the following way.

### **Business**

- Business
- Attending internal company business
- Meetings with customers/others
- Conference/Congress
- Trade Fair/Exhibition
- Armed Services
- Airline Staff
- Contract Home Leave
- Overseas Employment - Less than 12 months
- Overseas Employment - 12 months or more
- Studies paid by employer - Formal academic course
- Studies paid by employer - Other
- Au Pair

### **Leisure**

- Holiday - Fare paid separately
- Holiday - IT/Package-Hotel
- Holiday - IT/Package-Self Catering
- Holiday - IT/Package-Cruise
- Visiting friends and relatives
- Migration
- Studies (private/grants)-Formal academic course
- Studies (private/grants)-Other
- Cultural/sports
- Unaccompanied school children
- Other

A further breakdown for passengers on skiing holidays was also included.

## **Domestic and international passengers**

A passenger is classified as domestic if his flight is between two points both of which are in the UK (including the Channel Islands). Otherwise he is classified as international.

## **Modes of transport**

Mode of transport refers to the mode of surface transport used to get to the airport, which for outward air passengers was their last three modes of transport.

## **Socio-economic group**

The occupation group job dictionary produced by the Market Research Society was used to grade passengers.

## **Main Business**

The SIC classification is used to code this information.

## **Tabular Means**

In three of the tables that can be found in this report (T12, 14 & 20) means have been calculated to represent mean trip length (days), mean income (GBP) & mean age (yrs) . The upper category limits used to created these means were trip length (49 days), income (GBP 300,000) and age (80 yrs).

# History

Although a brief outline of the survey history can be found in the **introduction** a list of the surveys that have been conducted during 1987 - 2002 can be found below.

If you would require any further information about any of these surveys, please feel free to **contact us**.

Year	Airport	Sample	Cost
