Greville House
37 Gratten Road
Cheltenham
Glos GL50 2BN

Civil Aviation Statistics for earlier years Statistics for the period from January 1968 to December 1972 have been, or are in the process of being, published in the Civil Aviation Series of the Department of Trade & Industry's *Business Monitors*. The series comprise:

CA. 1	<i>Airport activity</i>	(Monthly)
CA. 2	<i>Air passengers</i>	"
CA. 3	<i>Air freight & mail</i>	"
CA. 4	<i>Airline operations</i>	"
CA. 5	<i>Airline operations</i>	(Quarterly)
CA. 6	<i>Domestic passenger traffic</i>	"
CA. 7	<i>Air passengers – international and cabotage</i>	"
CA. 8	<i>Airline financial statistics</i>	(Annual)

Annual versions of CA. 1 to CA. 7 are also published

The Civil Aviation Authority has no objection to the reproduction of extracts of information contained in this document if the Authority is acknowledged as its source.

Civil Aviation Authority

CAA Monthly Statistics

JUNE 1973

CAA Monthly Statistics is prepared by the Civil Aviation Authority with the co-operation of the United Kingdom airport and airline operators ; some of this information is required by the Civil Aviation Act, 1971. Statistics for the Channel Islands airports are provided by the Commandant for Jersey Airport and the Office of the Lieutenant Governor for Guernsey and Alderney Airports. The assistance from all these authorities is gratefully acknowledged.

Some of the figures included in *CAA Monthly Statistics* are provisional only and may be revised in later issues. Figures contained in monthly and quarterly tables have not been seasonally adjusted, but figures are given, in the tables covering past years, for the most recent six months and the corresponding six months one year earlier.

Chief Statistician
Civil Aviation Authority
Aviation House
129 Kingsway
LONDON WC2B 6NN

Symbols and Abbreviations The following are used throughout:

- + = UK Customs airport
- .. = not available
- = nil or less than half the final digit shown
- n.e.i. = not elsewhere included
- a.t-km = available tonne-kilometres

A.T. Movements = Air Transport Movements

Rounding of figures In tables where figures have been rounded to the nearest final digit, there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown.

Units of measurement Metric measurements are used throughout *CAA Monthly Statistics*.

- Tonne = 1000 kilogrammes
- Tonne-kilometres = The product obtained by multiplying the number of tonnes carried by the distance flown measured in kilometres

Conversion factors (foot/pound system to metric system)

- 1 short ton (2000 lbs) = 0.9072 tonnes
- 1 ton (2240 lbs) = 1.0160 tonnes
- 1 statute mile (5280 feet) = 1.6093 kilometres
- 1 short ton-mile = 1.4600 tonne-kilometres

The explanations of other terms used throughout the Tables are contained in the section on Definitions immediately following the Tables.

Civil Aviation Statistics — March 1973

Activity at UK Airports

Air transport movements at UK airports during March 1973 totalled nearly 51 000, an increase of 8 per cent over March 1972. In the first quarter of 1973 the growth was nearly 10 per cent compared with last year. This percentage comparison and quarterly comparisons that follow in this article take account of 1972 being a Leap Year; to arrive at the percentages one ninety-first has been deducted from statistics for first quarter 1972. The growth at the London area airports was much less than the national figures at 2 per cent for the month of March and 4 per cent for the quarter. The modest growths over the quarter at Heathrow (3·4 per cent), Gatwick (7·4 per cent) and Luton (13·0 per cent) were offset by the continuing reductions at Southend (-12·5 per cent) and Stansted (-20·7 per cent). Outside the London area and measured over the first quarter there was sizeable growth at Birmingham (40·5 per cent), Glasgow (12·4 per cent), Newcastle (52·2 per cent), Edinburgh (25·8 per cent) and Liverpool (19·7 per cent). There was also a sizeable growth in movements at the Channel Islands airports which in aggregate showed a 20·2 per cent increase. Charter movements at UK airports (other than the Channel Islands) had a 22·5 per cent growth in the quarter, overseas operators increasing slightly their share of this business. United Kingdom operators provided 9 per cent more scheduled service flights than in this quarter last year. Apart from the growth in air transport movements during March there was nearly 40 per cent growth in club and private flying movements. This activity has now reached more than double the number of movements of 5 years ago.

Nearly 2·9 million terminal passengers passed through the airports of the United Kingdom during March 1973, 11 per cent more than during March 1972. The underlying increase is probably a little higher than 11 per cent because in 1972 the Easter holiday commenced at the end of March and some of the additional holiday traffic would have been included in the March 1972 statistics; this year Easter fell wholly within April. Growth in the March 1973 quarter compared with 1972 was over 16 per cent. The London area airports' growths for the month, 7 per cent, and for the quarter, 12·5 per cent, were lower than the national figures. The number of passengers using Heathrow during the quarter increased by 14·9 per cent and at Gatwick the increase was 10·8 per cent; in the London area totals, however, these increases were diminished by the continuing declines at Southend - 10·0 per cent and Stansted - 46 per cent. During the March quarter there was nearly 20 per cent growth in passengers using charter flights and 15 per cent growth in those using scheduled services. In this period over 90 per cent of the passengers travelling on charter flights and 68·5 per cent of those on scheduled services were travelling in the aircraft of UK airlines. Passengers on international services accounted for 70 per cent of those using UK airports during the quarter and, whereas, over the preceding five years this proportion had increased each year, in 1973 the proportion (70·1 per cent) is very slightly less than for 1972 (70·5 per cent). At the London area airports the proportion of international passengers has been 85 per cent for both the March 1972 and March 1973 quarters.

During the March 1973 quarter the largest proportion of passengers using international scheduled services were travelling on routes to United States of America (13·6 per cent) with slightly smaller proportions travelling to France (11·8 per cent) and Germany (10·2 per cent). The London-Paris route maintained its position of having the most intensive traffic with 9 per cent of the total number of passengers using scheduled services despite a decline in numbers carried since last year. The UK-France and UK-Germany services, each suffered declines, at about 8·5 per cent, but the UK-USA services had 22·5 per cent growth. The most used routes for passengers travelling on international charter flights were those between the UK and Spain which had over 45 per cent of the traffic: 26·4 per cent growth since the March 1972 quarter was achieved on these routes. The next most used routes were those to Germany (11 per cent) and to Italy (7·7 per cent); growth on these routes was 4·5 and 20·7 per cent respectively. Most growth was achieved on the services to North Africa which have more than doubled at 107·8 per cent, and which accounted for 6·1 per cent of the March 1972 quarter's traffic.

Passengers on the domestic air routes of the United Kingdom, during the first quarter of 1973, totalled 1·2 millions which is nearly 18 per cent more than last year. Changes in the relatively small numbers of passengers using domestic services tend to lead to percentage change figures which seen in isolation of the small numbers involved appear dramatic; in a comparison of the first quarters of 1972 and 1973 there are considerable variations on many routes. However, the number of passengers using the popular London-Scotland routes shows a substantial growth at 20 per cent.

During March 1973 over 61 000 tonnes of cargo was picked up or set down at United Kingdom airports, 16·7 per cent more than a year ago. In the first quarter of 1973 the growth was 20 per cent over 1972. For the same periods the growth at the London area airports was 18·9 per cent, somewhat less than the national average: there were increases at Heathrow (20·4 per cent) and Gatwick (28·2 per cent) but in the area figure these growths were diminished by the decline at Southend (-18·5 per cent). Outside the London area the largest freight airport, Manchester, had 13·8 per cent growth. There was an increase in cargo carried on scheduled services of 18·9 per cent and of this larger traffic the UK airlines carried 53·1 per cent. The growth in cargo carried on charter flights was 29·1 per cent.

Output of UK Airlines

In March 1973 the output of United Kingdom airlines for scheduled and non-scheduled services together amounted to 697 million available tonne-kilometres which is an increase of 11·9 per cent over March 1972. Scheduled services accounted for 478 million available tonne-kilometres and was the same percentage of the total (69) as in February 1973. The growth of 12 per cent on March 1972 was, however, slightly lower than the growth of February on a year earlier. Just under 1 220 000 passengers and 29 000 tonnes of cargo were carried by the scheduled services of the United Kingdom airlines during the month of March at an

over-all load factor of 53.1 compared with 47.1 during March 1972. Seat kilometres used amounted to 54.8 per cent of those available showing quite an improvement over the March 1972 factor of 48.5; the seat factor was better on domestic services (67.1 per cent) than on international services (53.9 per cent).

The total output for non-scheduled services in March 1973 was 218.1 million tonne-kilometres, an increase of 11.4 per cent on the output for March 1972.

Inclusive tours accounted for 97.1 million tonne-

kilometres which represented 44.5 per cent of all non-scheduled output.

NOTE: Statistics of airport activity, passengers and cargo are derived from data supplied by airports. Airline statistics are based on data supplied by the airlines. Data from the two sources is not strictly comparable. There are small differences in timing and more significant differences arising because airlines are not asked to report non-revenue passengers and cargo.

The Development of Inclusive Tour Charters

Package holidays by air were introduced in the early 1950s. Their rapid development was due largely to the efforts of the British independent airlines, who were seeking a firm base for the expansion of their activities. Excluded almost entirely from the scheduled market, these airlines had made a massive contribution to the Berlin airlift but were dependent for nearly three quarters of their passenger traffic on government troop contracts. The only way the independents were permitted to enter the scheduled market was as "Associates" of the Airways Corporations and then only in the development of new services or new types of scheduled service.

Initially, inclusive tour charters were regarded as a special type of scheduled service, and were operated under Associate Agreements approved by the Minister of Transport and Civil Aviation on the advice of the Air Transport Advisory Council. There were objections to the early applications for permission to operate ITCs, on the grounds that they would cause diversion of traffic from existing scheduled services, but the Air Transport Advisory Council considered that most of the traffic would be new air traffic or traffic of a type which had previously travelled by surface transport. It is difficult to determine to what extent diversion did take place from normal scheduled services. For some years ITC traffic was too small in relation to scheduled traffic for any effect to show and there was at the same time another type of inclusive tour being developed, known as ITX, where traffic was carried not as a separate charter operation but as part of a normal scheduled passenger load. In fact, by the summer of 1956 ITX traffic was accounting for twelve per cent of BEA's summer revenue.

Figures for ITX traffic are not readily available and this article is concerned solely with Inclusive Tour Charters, but it should be noted that, rapid as the growth in ITC traffic has been, it is not the whole of the civil aviation inclusive tour market.

Inclusive tour charter traffic has shown remarkable growth ever since its inception. Apart from 1959, which was the only year in which traffic actually declined, ITC traffic, even in years of general recession in the airline industry, has always grown by better than 10 per cent a year, in fact the average rate of growth in the twenty years since 1953 has been 37 per cent.

Between 1953 and 1956 it grew at an average annual rate of 94 per cent, but after that it settled down to a less spectacular but remarkably steady average growth rate of 34 per cent, ground lost in years of recession being very quickly recovered in the following years. The

steadiness of the trend is clearly shown in Figure 1, where the number of passengers carried each year has been plotted on a logarithmic scale.

In spite of rapid growth, it was many years before ITC traffic became a major part of the independent airlines' operations. In 1953 about 83 per cent of the capacity operated by the independents was devoted to general civil and military charters, 16 per cent to scheduled services and only 1 per cent to inclusive tour charters. By 1963, capacity deployed by them on scheduled services had risen to 36 per cent of the total, inclusive tour charters took 14 per cent and the remaining 50 per cent was devoted to other types of charter. It was only in 1967 that ITC capacity operated by the independent airlines equalled scheduled capacity, with each accounting for 28 per cent of the total, but by 1972 the ITC share had risen to 41 per cent, with other types of charter taking a similar proportion and scheduled services the remaining 18 per cent.

The increasing importance of inclusive tour charters is illustrated in Figure 2.

The early inclusive tour charters were largely to France, Austria and Switzerland, although Spain and Majorca were appearing in the brochures as early as 1952. ITCs were essentially a summer activity, mainly operating from weekend to weekend and often incorporating a European coach tour. The traffic grew rapidly, increasing from 12 000 passengers in 1953 to nearly 540 000 in 1963, an annual rate of growth of better than 45 per cent, but life for an operator mainly dependent on ITC work was precarious. With traffic concentrated in the peak summer months, and then largely at weekends, it was extremely difficult to achieve a satisfactory level of aircraft utilisation. As late as 1963, the aircraft of many of the smaller independent companies were being employed for an average of under three hours a day.

As demand grew, new holiday centres, many specifically designed to cater for the ITC trade, were developed in Spain, the Mediterranean area and North Africa. The availability of these more southerly resorts and the provision of hotels devoted exclusively to inclusive tour business enabled the length of the season to be increased and made possible some staggering of departures and arrivals throughout the week. By offering the attraction of winter sunshine it was also possible to encourage the development of winter ITCs. The problem of seasonality is still a very real one but it is not as acute as it was in the early 1960s. Since 1965, when winter ITCs accounted for only 10 per cent of the annual ITC traffic carried by British operators, traffic

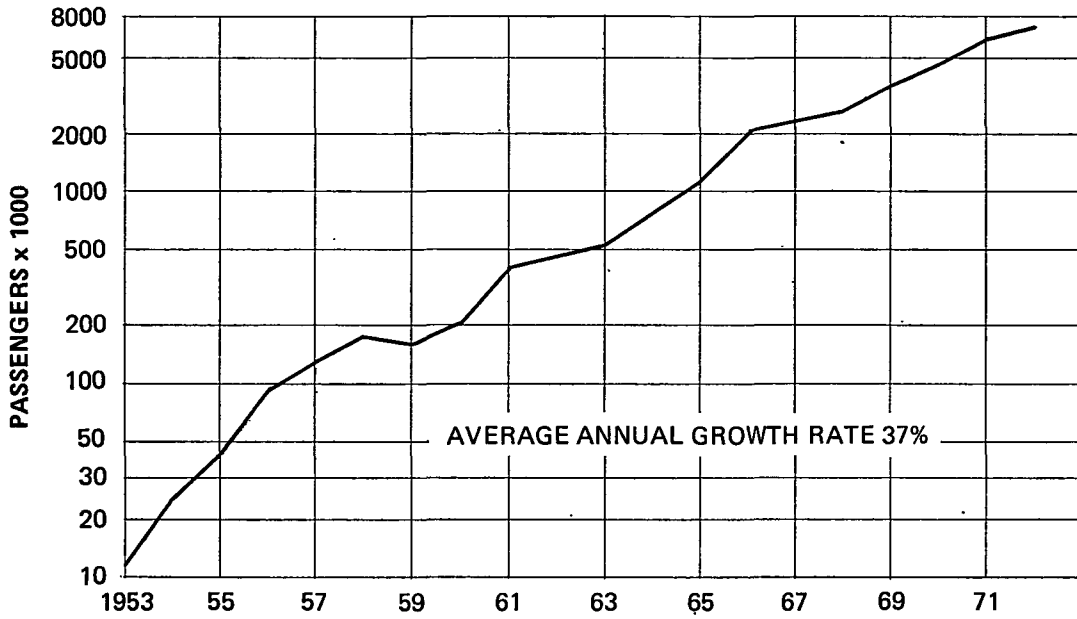

Fig. 1 GROWTH OF INCLUSIVE TOUR CHARTER TRAFFIC

Fig. 2 U K INDEPENDENT AIRLINES PERCENTAGE OF CAPACITY DEPLOYED ON I.T.C s AND OTHER OPERATIONS

Fig. 3 SEASONALITY OF INCLUSIVE TOUR CHARTER TRAFFIC
NUMBERS OF PASSENGERS DEPARTING FROM U K EACH MONTH

has grown faster in the winter than in the summer. The growth of British operators' traffic between the summers of 1971 and 1972 amounted to only 3.6 per cent; this may be compared with growth in the preceding winter of 118 per cent. In Figure 3 the monthly pattern since 1968 is shown of all passengers departing from the United Kingdom on inclusive tour charters. The graph indicates clearly the sharply rising trend and the convergence of the troughs and the peaks.

Spain and the Balearic Islands have become by far the most popular destination for United Kingdom residents travelling on ITCs. Although in recent years destinations in Italy, Germany, Portugal, Yugoslavia and Greece have been claiming an increasing share of summer traffic, more than half the passengers in the summer of 1972 still chose Spain or the Balearics for their holidays. At the same time, Spanish resorts have become increasingly popular for winter holidays,

traffic was two and a half times greater in 1972 than in the previous year and accounted for over 60 per cent of the winter ITC traffic originating in the United Kingdom. The Canaries, although attracting an increasing number of passengers, have been decreasing in importance as a winter destination and their share of the traffic, which had been 11 per cent in the winter of 1968/69, had declined to 4 per cent by 1971/72. Tunis, Greece and Portugal, on the other hand, have all been attracting a larger proportion of winter traffic. The very rapid growth in traffic to more southerly destinations has also meant that the traditional winter sports centres of Germany and Switzerland, although still enjoying a healthy rate of growth, 36 per cent and 50 per cent respectively in 1971/72, have declined in relative importance for United Kingdom ITC traffic.

The percentage distribution of ITC traffic between the leading destinations is shown in Figure 4.

*Including the Balearics, but excluding the Canaries.

.. = Less than 0.5% of total.

The United Kingdom has always generated the major part of the Inclusive Tour Charter traffic originating in Europe. According to statistics collected by the European Civil Aviation Conference, the United Kingdom contributed about 40 per cent of the ITC traffic generated in ECAC member States in 1970/71. The second largest contributor was Germany, with about 25 per cent of the total, followed by Denmark, with 7 per cent, and Sweden and the Netherlands, both with 6 per cent. Spain, which is by far the largest recipient of ITC traffic, receiving 59 per cent of the traffic generated by ECAC States, itself contributed the sixth largest share of the total with 5 per cent of the originating traffic.

There is a tendency for UK airlines to specialise in inclusive tour charters. In the two years ended March

1973 Britannia Airways, Dan-Air/Skyways, Court-Line Aviation, and Monarch Airlines each devoted more than two-thirds of their capacity to this type of activity. The average for the UK industry as a whole was just under 15 per cent. In the year ended March 1973, the five airlines mentioned plus British Airways (which has a small but growing percentage of its activity devoted to ITCs) and BCAL (which has contracted its ITC business over the past two years) accounted for 95.3 per cent of the total United Kingdom ITC effort. Detailed statistics by company are set out in Figure 5. The last column of this table is of some interest. As might be expected it shows a high load factor but the consistency of individual companies load factors compared over two years is striking and unlikely to have occurred by chance.

Year ended 31 March 1972

London includes Heathrow, Gatwick and Stansted.

S.E. England includes Ashford, London, Luton, Lydd and Southend.

N. England comprises the airports in England north of a line from the Mersey to the Humber (Manchester, Liverpool, Blackpool, Newcastle, Leeds/Bradford and Tees-side).

Glasgow includes Prestwick and Abbotsinch.

(a) N. France comprises the airports north of the line of 49° latitude.

(b) Soviet Union and Eastern Europe includes the United Soviet Socialist Republics, Bulgaria, Czechoslovakia, Hungary, Poland, Roumania and the Eastern Zone of Germany but excluding Berlin.

(c) North Africa includes Algeria, Libya, Morocco and Tunisia.

(d) Commonwealth countries only.

(e) Commonwealth countries including Rhodesia.

(f) Middle East includes Iraq, Iran, Israel, Jordan, Lebanon, Persian Gulf States, Saudi Arabia, Sudan and the United Arab Republic.

(g) Total is in respect of charter passengers only. Passengers on scheduled flights included in London – Other Italy.

(h) Total is in respect of charter passengers only. Passengers on scheduled flights included in other routes to Italy.

The figures show the uplift and discharge of passengers at United Kingdom airports on services operated there according to their immediate destination or last point of embarkation overseas on those services. These may not, in all cases, be the origin or destination of passenger journeys: they may be places at which a journey was broken or a connection made with another air service. The figures in this table include all passengers carried on scheduled and charter services excluding those carried on aircraft chartered by Government Departments.

Domestic Passengers by Main Routes

Table 19

(a) Heathrow, Gatwick and Stansted
 (b) 'Glasgow' includes Prestwick and Abbotsinch
 Traffic counted in either direction

The figures show the uplift and discharge of passengers according to the destination and origin of the route. Because of the method of collection of this information there are discrepancies between the reports received from airports on a route, particularly in the case of multi-sector flights. In most cases, however, the discrepancies are small, but in a few cases the figures include an estimated component.

Tables 24 and 25 cover all operations performed under Classes B, C, D, and types I and VI of Class E licences. The division between 'inclusive tours' (Table 24) and 'other separate fare charters' (Table 25) is based on the terms of the various licences. A service is an inclusive tour service where the tariff includes the cost of accommodation.

Definitions

AIRPORT ACTIVITY

An air transport movement is a landing or a take-off of an aircraft engaged on commercial air transport. The types of movement covered are all scheduled service movements, whether loaded or empty, and charter movements transporting passengers or cargo from one point to another. All other types of commercial flying are excluded (e.g. flights returning to the airport of take-off without landing elsewhere, empty charter positioning flights paid for by the charterer, ferrying of empty aircraft, etc.).

Empty charter positioning flights are flights by chartered aircraft moving into position for transport flights or returning to base after such flights.

Other commercial flights are miscellaneous non-transport charter flights (e.g. commercial delivery or ferry of empty aircraft and local flights for the Press, survey companies or farmers).

Test and training flights are flights for the purpose of testing aircraft or airports, or for training flying crew or ground personnel. Also included in this category are demonstration flights by makers or sellers of aircraft and aviation equipment. Aero-club instructional flights are excluded from this category and shown under 'Aero-club'.

Other non-commercial flights by air transport operators are flights by air transport operators for the sole purpose of moving their own aircraft, personnel or stores from one place to another, and air transport flights forced to return to base by bad weather, engine failure or other causes.

Private flights are flights for purely private purposes by private owners or other private aircraft operators, excluding aero-club flights.

Aero-club flights are flights operated by aero-club members for instruction or pleasure.

Official flights are flights for official purposes by British or foreign civil Government Departments excluding air transport movements.

Military flights are flights by British or foreign military personnel exclusively for military purposes.

AIR PASSENGERS

Passengers includes all revenue and non-revenue passengers on air transport flights. Air crew being carried on such flights other than as members of the aircraft's complement are classified as non-revenue passengers.

Revenue passengers are those who pay 25 per cent or more of the normal applicable fare.

A terminal passenger is a passenger joining or leaving the aircraft flight at the reporting airport. A passenger travelling between two reporting airports is counted twice, once at each airport.

A transit passenger is a passenger who arrives at and departs from a reporting airport on the same aircraft which is transiting the airport. Each transit passenger is counted once only and not once on arrival and once on departure.

International services are services flown between the United Kingdom (including Great Britain, Isle of Man, Channel Islands and Northern Ireland) and places outside.

Domestic services are services flown entirely within Great Britain, Isle of Man, Channel Islands and Northern Ireland.

Cabotage is traffic carried between territories of the United Kingdom other than domestic services.

Scheduled services are those performed according to a published timetable, including those supplementary thereto, and open to use by members of the public.

Non-scheduled services include all air transport flights other than scheduled services.

Charter services are those transporting passengers or cargo for hire or reward from one point to another, other than scheduled services.

AIR CARGO

Cargo means the weight of cargo (including accompanied vehicles) picked up and set down by aircraft on air transport flights. Cargo in transit through the airport on the same aircraft is excluded as is mail, company stores, excess baggage and diplomatic bags picked up and set down. (See also definition below when used in airline statistics where mail and excess baggage are included.)

Tonnes are metric tonnes of 1000 kilogrammes (2 204.62 lb.)

AIRLINE OPERATIONS

Aircraft-kilometre

(Aircraft-km) an aircraft-kilometre is performed when an aircraft flies one kilometre. Aircraft-kilometres equal the sum of the products obtained by multiplying the number of flights performed on each stage flight by the distance measured in kilometres.

Stage flights that part of the flight between two consecutive places, i.e. from take-off to the next landing, excluding technical stops, on the route.

Aircraft-hour an aircraft hour is performed when an aircraft flies for one hour: aircraft hours are measured on the basis of block-to-block time.

- Passengers uplifted** The number of passengers uplifted is obtained by counting each revenue passenger on a particular flight (with one flight number) once only and not repeatedly on each individual stage of flight, with the single exception that a passenger flying on both the international and domestic stages of the same flight would be counted as both a domestic and an international passenger.
- Seat-km available** a seat-kilometre is available when a seat is flown one kilometre. Seat-km available is equal to the sum of the products obtained by multiplying the number of passenger seats available for sale on each stage flight by the distance measured in kilometres.
- Seat-km used** a seat-kilometre is used when a seat occupied by a revenue passenger is flown for one kilometre. Seat-km used is equal to the sum of the products obtained by multiplying the number of revenue passengers carried on each stage flight by the distance measured in kilometres.
- Passenger load factor** is an expression of seat-km used as a percentage of seat-km available.
- Tonne-km available** a metric tonne of payload space available flown one kilometre. Tonne-km available is equal to the sum of the products obtained by multiplying the number of tonnes available for the carriage of revenue load (passengers and cargo) on each stage flight by the distance measured in kilometres.
- Tonne-km used** a metric tonne of revenue load carried one kilometre. Tonne-km used is the sum of the products obtained by multiplying the number of tonnes of revenue load (passengers and cargo) carried on each stage flight by the distance measured in kilometres.
- Overall load factor** is an expression of tonne-km used as a percentage of tonne-km available.
- Cargo** means any property carried on an aircraft. In airline statistics it includes the weight of vehicles carried, excess baggage, mail and diplomatic bags (see also definition above for air cargo statistics where mail, excess baggage, company stores and diplomatic bags are excluded).
- Mail** covers only that handled by postal administrations and includes troop mail.
- Separate Fare Charters** are those where the charterer re-sells part of the capacity of the aircraft to the public at large; an organisation, etc.
- Inclusive Tours** are separate fare charters where the cost to the passenger includes the cost of accommodation.
- Single Entity Charters** are those where the charterer has exclusive use of the whole capacity of the aircraft and does not dispose of any of it to third persons for reward.
- Sub-charters** are charters to other British or foreign operators.
- Fifth Freedom Charters** are those between foreign territories.
- Licence** means an air transport licence granted under Section 22 of the Civil Aviation Act, 1971.

Classes of Licence

- Class A** Means a licence for an air transport service (not being a charter service) between places named in the licence involving more than four flights in any one direction between the same two places.
- B** Means a licence for a charter service between places named in the licence (not being a group charter service) involving more than four flights in any one direction between the same two places.
- C** Means a licence for an air transport service between places named in the licence involving not more than four flights in any one direction between the same two places.
- D** Means a licence for a group charter service between places named in the licence, involving more than four flights in any one direction between the same two places.
- E** Means a licence for an air transport service which is not restricted to flights between places named in the licence. The types of Class E Licence are :—
- Type I** Group Charter flights of the same nature as those licensed under Class D but for flights not restricted to places named in the licence.
- Type II** Fifth Freedom Charters, i.e. flights between foreign territories.
- Type III** Charters to other airlines (British).
- Type IV** Charters to other airlines (Foreign).
- Type V** Cargo charters for more than one consignor.
- Type VI** Passenger charters for the carriage of more than one affinity group.
- Type VII** Miscellaneous charter flights.
- Exempt Services** are services which do not require a licence by virtue of Section 21(2) of the Civil Aviation Act 1971, or an instrument made under that section, which may include single entity charters, charters to Government Departments, etc.
